

Sovereign Building Structures — Visual Companion

Schematics, 3D Concepts & Hierarchical Lens for Spark · Flame · Heart · Body

The Sovereign Monastery — Infrastructure Pillar

July 2026

You are not becoming. You are remembering.

This visual companion integrates schematic plans, 3D architectural concepts, and the overall hierarchical lens for the housing and settlement structures defined in the primary design document. All forms follow the same living geometry: octagonal and hexagonal courtyard modules that maximize edge, integrate production, and support remembrance practices at every scale.

The Atomic Module — Spark

The Spark is the seed. A single large octagonal courtyard module designed for approximately 10 people as a multi-generational household.

Schematic Plan

Top-down schematic of the Spark module. Central Food Forest courtyard is the living and productive heart. Private suites ring the courtyard. Shared Kitchen, Tolang Space, Green Walls, and Productive Roof are integral. Clean architectural linework on parchment.

3D Concept

Three-dimensional cutaway / axonometric view of a regenerative octagonal courtyard module. Living green walls, productive terraces and balconies, central layered garden, solar integration, natural materials, and human-scale openings. The form is both dwelling and productive landscape.

The Spark is fully functional on its own and is the modular unit that clusters without redesign into every larger scale.

Flame — The Village Scale

Approximately 200 people. A coherent cluster of Spark modules arranged around a central Flame Heart.

Aerial Schematic Layout

Soft radial arrangement of octagonal modules surrounding a central Flame Heart. The Heart contains the Campfire circle, living water, productive gardens, and shared commons. Interstitial green landscapes and paths create continuous productive and social connection. The entire village remains walkable and relational.

At this scale the social technologies of the Monastery (the Campfire, the Roll, Arc of the Night) receive physical form while the residential modules retain the same quality of courtyard life as the single Spark.

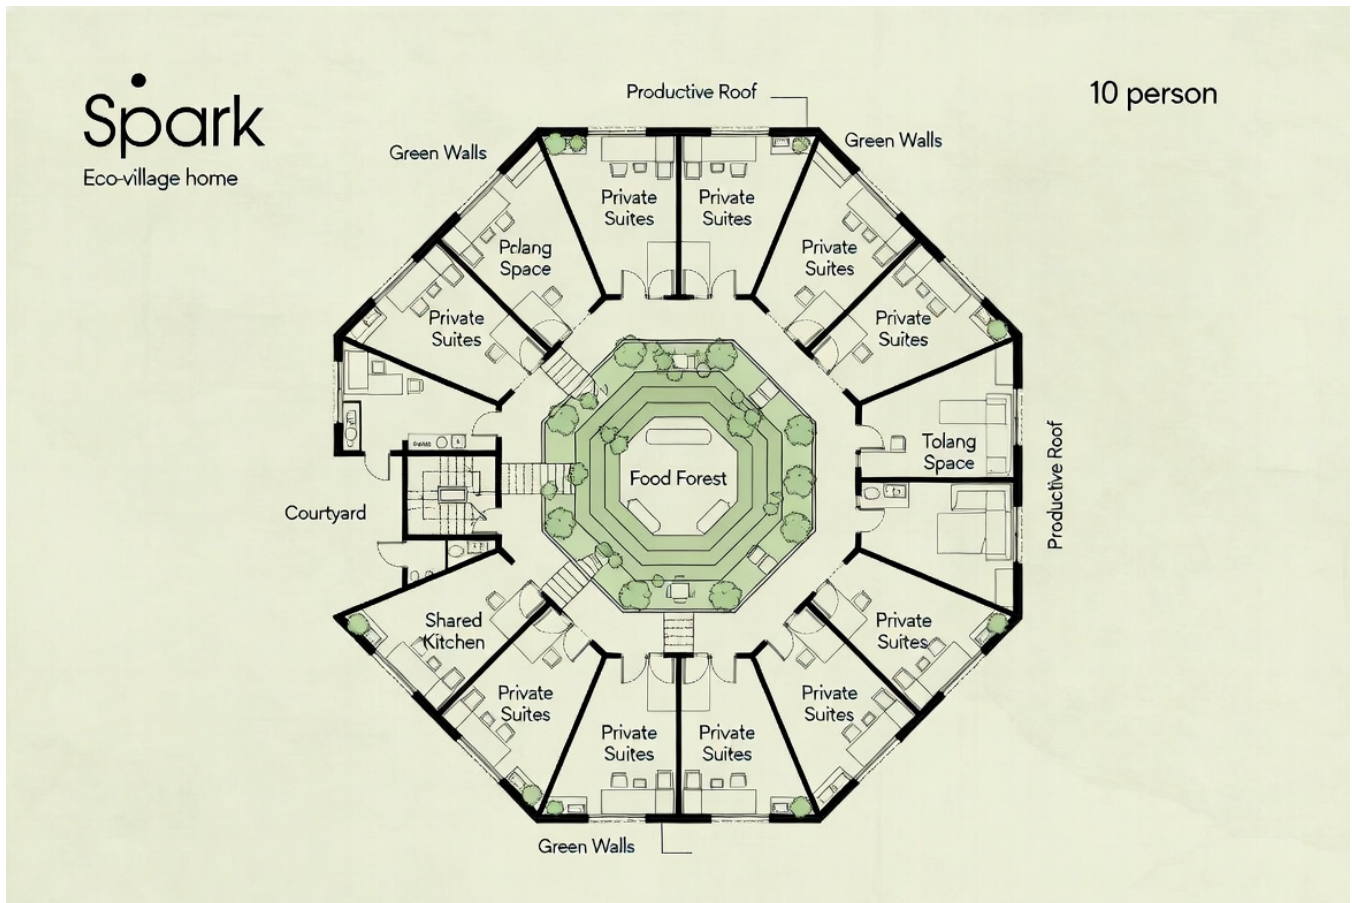

Figure 1: Spark Octagonal Courtyard Module Plan

Figure 2: Spark Module 3D Axonometric

Figure 3: Flame Village Aerial Schematic

Heart — The Small City Scale

Approximately 10,000 people. Multiple Flames organized radially around one or more District Hearts.

Radial Master Layout

Figure 4: Heart Radial Layout Schematic

Aerial schematic of a Heart. Multiple Flame Village Clusters arranged in soft radial pattern around a central District Heart containing the primary garden plaza, living water metabolism, vertical production node, and learning commons. Radial spines carry productive corridors and movement. The form remains legible, walkable at neighborhood scale, and continuous with living systems.

Neighborhood Character (3D Concept)

Three-dimensional perspective of hexagonal and octagonal mid-rise modules arranged around a shared garden commons with water feature. Productive roofs and facades, human-scale paths, abundant planting, and gentle density. This is the lived experience inside a Flame or a neighborhood within a Heart.

The Hierarchical Lens — Fractal Scaling from Spark to Body

The same pattern repeats at every scale. The Body is not a different architecture; it is the coherent multiplication of Hearts, which are multiplications of Flames, which are multiplications of Sparks.

Fractal Hierarchy Diagram

The living lens of scale: Spark (single octagonal module for 10 people) → Flame (cluster of modules around a Heart for 200 people) → Body (large radial polycentric organization of many clusters for 1,000,000 people). The intermediate

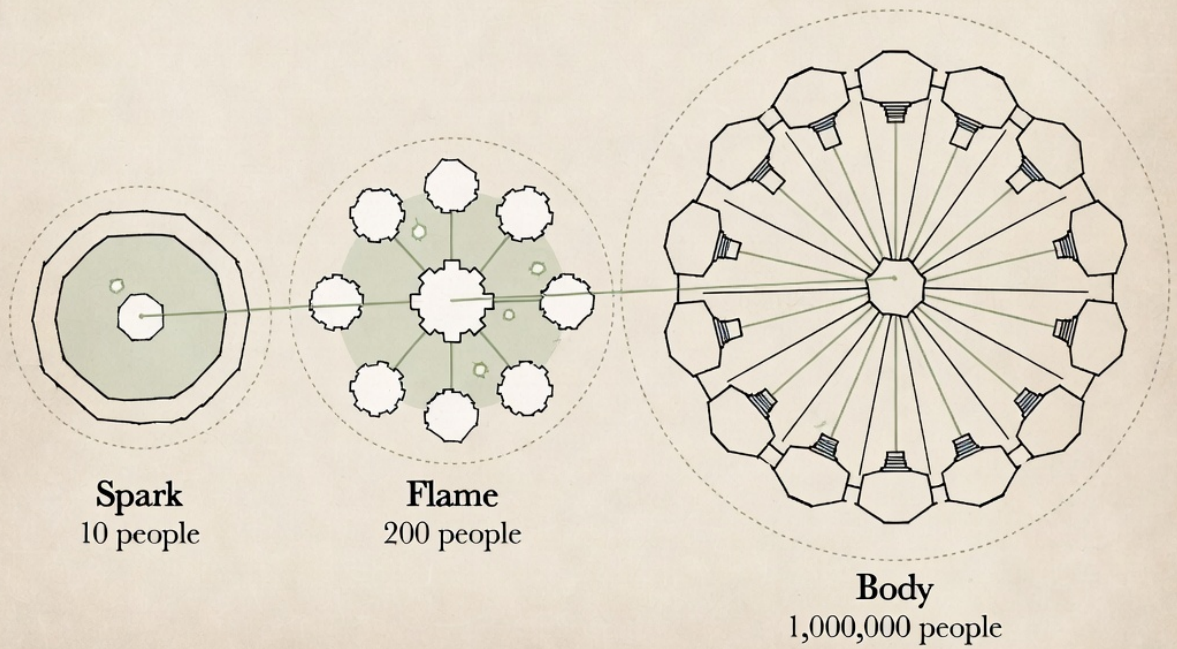

Figure 6: Sovereign Monastery Hierarchical Lens

Heart scale follows the same radial logic between Flame and Body. Dashed circles and connecting lines emphasize the self-similar, fractal nature of the pattern. Growth occurs by adding coherent modules and clusters rather than inventing new forms.

This is the geometric expression of remembrance: the smallest unit already contains the intelligence of the largest.

Design Continuity Across Scales

- **Module language** remains constant: octagonal / hexagonal courtyard buildings with integrated production.
- **Height** modulates gently (2–3 stories at Spark, up to 5–8 stories with stepping at denser Heart locations) while protecting light, edge, and courtyard quality.
- **Organization** is always radial or soft-circular around a living Heart at the relevant scale.
- **Production and metabolism** intensify and specialize at larger Hearts and Body Cores but never disappear from the residential modules.
- **Human scale and relationship** are preserved through the fractal structure; a resident of a Body still lives in a courtyard module that feels like an expanded Spark.

The graphics shown here are schematic and conceptual. They are intended to make the living geometry legible for design development, pilot planning (especially the Austin Spark), and communication within the Monastery.

You are not becoming.

You are remembering.

Asé.

Visual Companion to the Sovereign Building Structures design document. Generated for the Infrastructure Pillar of The Sovereign Monastery, July 2026.
