

FLAME COMPANION

Final System Filing — Circular Personal AGI

Archiver's Pad · Dual Hardware Paths · Spatial + Traditional Computing

Circular Bone-Conducting Knob — Core Interface

*You do not put the Companion on.
You step into the circle — or you put on the glasses that contain the circle.*

SOVEREIGN CIVILIZATION COMPANY · THE SOVEREIGN MONASTERY · 2026

1. ARCHIVER'S PAD — THREE FORM FACTORS

The Archiver's Pad is a family of digital e-ink notepads that feel like real notebooks while connecting directly to the Companion's shared database and AR layer.

Form Factors

1. Small Field Notebook — pocket-sized for capture on the move
2. Standard-size Notebook — everyday personal journal and working pad
3. College-ruled Notebook — full writing and structured note-taking experience

The three Archiver's Pad form factors: Small Field, Standard, College-ruled

Capabilities

Every note integrates into a personal knowledge network that deeply combines Obsidian (bi-directional linking & graph), Notion (detailed databases & relations), and Calendar (time-based views). AR projections visualize connections in space. Users can write a physical letter on the pad; the system sends it as an augmented digital letter preserving actual handwriting. For special cases the Companion can read the letter aloud to the recipient in the user's own continuously learning voice profile.

2. CORE HARDWARE DESIGNS — TWO PATHS

Path A — Bone-Conducting Knob + AR Contact Lenses

Circular bone-conducting knob at eye level (directional arrow for alignment). Multi-cameras (sees what you see), microphones (hears what you hear), bone-conducting speakers (private voice). Opt-in AR contact lenses for screens, shared experiences, and private overlays. Maximum discretion.

Path B — AR Glasses with Integrated Bone Conduction

Elegant full-frame AR glasses with bone-conducting technology built directly into the frame and full-screen AR display lenses. A heavily upgraded Meta Ray-Bans combined with high-fidelity full-field AR. Single familiar wearable that contains the entire circle.

AR Glasses with integrated bone conduction and full-screen AR lenses

3. COMPUTING INTERFACES

Both hardware paths support two distinct computing methods, driven by virtually unlimited interstellar-level computing power (local + Lattice + selective overflow).

Spatial Computing (Preferred)

Primary method of operation, similar to advanced spatial interfaces. Windows, documents, and tools float in space. Includes Text Flow: click any text field → activate microphone → speak your input directly. Ideal for creation, research, planning, and multi-context work.

Spatial Computing interface with floating windows and Text Flow voice input

Traditional Computing

Virtual projector interface displayed through glasses or contact lenses. Users can project as many virtual computer screens as desired. Requires physical keyboard and mouse for traditional typing and navigation. The Companion itself acts as the computer and can emulate preferred operating systems or run a Default Sovereign OS that learns the user's historical workflows.

4. CONNECTION TO THE FULL FLAME STACK

The Companion remains the unifying personal intelligence. It is powered by Hearths and Reservoirs via Tesla Beams from Orbital Nodes. It directs Spiders to print Knobs, glasses, Pads, and modules. It uses the Lattice for mesh and shared AR. It is the continuous will that makes the entire body coherent while remaining offline-first and under absolute user authority.

5. CLOSING DOCTRINE

Three physical Archiver's Pads that feel like real notebooks yet open into an infinite Obsidian-Notion-Calendar network. Two elegant hardware paths (Knob + Lenses, or full AR Glasses with bone conduction). Two computing modes (Spatial with Text Flow preferred, Traditional projected screens when desired). Full integration with the Flame Spider, Orbital Nodes, Lattice, and Reservoir.

It sees what you see.

It hears what you hear.

It speaks only to you.

It archives everything you choose to keep, in your own handwriting and your own voice.

You do not put the Companion on.

You step into the circle — or you put on the glasses that contain the circle.

Asé.
